Here is a map of the other property.

Remember: Is in pdf, highlight the area to copy, go to Edit, click in Take a Snap Shot, and you can copy into a power point slide.

The email gives the address and name of the property owner.

Yes, this helps, and I appreciate all your help. I have a similar one from 1956 (see attached FYI). It shows where residents are currently located, and as you can see, some were built over the old refinery ponds.

Can you locate for me over a current photograph the house over the former pond? And maybe provide some estimated coordinates? Which one? What house?

See the little yellow rectangle inside the blue circle and blue square. (Sorry, I don't have a Google Earth that I could see what's going on there. I will like to bring this to the OSC attention.)

Bart

Hi Bart,

I did a search of our sources and the oldest image I could find was from 1955. I've attached a map so you could see what it looks like.

I couldn't find anything from 1941. It appears we would need to go to the sources you found - either the Dept of Libraries, Aerial Oklahoma or the Oklahoma Petroleum Information Center (OPIC). We haven't worked with any of the 3 before so this is all new. It appears that the Dept of Libraries would require a visit so we could probably rule them out. I checked the website for Aerial Oklahoma and they have something they call the Historical Decade Package for only \$95 - 1 image may not cost too much. It appears from your email that OPIC may also have the 1941 image and would be able to scan and email as well. I would probably try OPIC first to see if we could get it for free and then use Aerial Oklahoma as a backup in case OPIC is not able to provide us with the image.

Jeff

How can we get an old Oklahoma Creek County photograph of 1941.

I understand there is one available in the Oklahoma Department of Libraries, Archives Division

I got this information from the Index of the aerial photograph collection.

- (1) I called and they say they have the photograph, but need to go there and can scan the photographs in a flash drive. They recommend to make an appointment. They are at 200 NE 18th Street in OKC, OK.
- (2) They mentioned that Aerial Oklahoma can do this, they frequently do this (go and scan), they mentioned the name Jamon Year ?????
- (3) Do we have any way to access this type of information?

Dept. of Libraries
200 NE 18th St
Oklahoma City,
Oklahoma 73105

(800) 522-8116

State Archives
(405) 522-3579

State Records Center
(405) 524-4416

- (4) Another source of aerial photographs is the Oklahoma University. They list having a Creek County photographs for 1941. This is information from the Oklahoma Geological Survey – Aerial Photo Inventory. - Aerial Photos An inventory by county of aerial photos currently available for examination in the Data Library at the Oklahoma Petroleum Information Center. Contact Richard Tarver at 405/325-1119 or rdtarver@ou.edu for further information, including requests for scanned images.

I am trying to find out from old photographs what facilities, tanks, ponds, etc., existed in the former Wilcox and Lorraine refineries, north of Bristow in Creek County, OK. All these facilities were removed and current photographs only show the cleared land.

Any ideas?

By the way, thanks for the S. Lane maps. EPA removal is coming tomorrow to discuss a site sampling plan, and weather permitting, they maybe sampling that property shortly. Again, thanks, the maps were very helpful.
